

Quite simply XM and all satellite radio has built a better mousetrap. Instead of trying to compete with XM Radio the NAB is using the FCC and the government to try squash the competition. This is totally unfair! As far as I am concerned XM and all satellite radio can broadcast anything they want. This is not issue of indecency so how can the FCC regulate this? This is the marketplace in action. Do not regulate this. Also I am a registered voter and I vote!
